#### **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1, 2, and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Carter et al (USP 6,383,724).

### Regarding claim 1:

Carter teaches an organic removal process wherein ozone is mixed with DI water via a sparger plate (140). The wafers 132 comprises at least one layer of photoresist to the mixture of ozone and DI water.

Regarding claim 2: The wafers are placed with processing tank 128.

Regarding claim 8: The mixture of DI water and ozone is agitated via sparger plate

# Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 3-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Carter in view of Matthews (USP 5,464,480).

The teachings of Carter were discussed above.

Application/Control Number: 10/634,440

Art Unit: 1763

Regarding claim 3 Carter fails to provide a means of temperature control.

Matthews teaches a process tank 13 filled with subambient deionized water, with water feed line 7 running through chiller 8 (temperature control).

The motivation to provide the temperature control in the apparatus of Carter is to the temperature of the contents and inlets to the tank so that the chemical environment (namely reactions that would lead to more contaminants) can be maintained.

Régarding claims 4 and 5:Carter teaches the temperature of the treating solution is 16-25 deg. C. This range meets the limitations of claims 3-5.

Regarding claims 6 and 7 Carter fails to teach the recirculation of deionized water

The drain line 12 is diverted to deionized water reclaim 10, and fresh deionized water is activated for the rinse.

The motivation to recirculate the deionized water is to limit material costs of operating the system.

Thus, it would have been obvious for one of ordinary skill in the art at the time of the claimed invention to provide for recirculating DI water, a temperature control means, and the sparger at the bottom of the tank as suggested by Matthews.

#### Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sylvia R MacArthur whose telephone number is 571-272-1438. The examiner can normally be reached on M-F during the core hours of 8 a.m. and 2 p.m.

Application/Control Number: 10/634,440
